**Architectural design for Wood structures, Metal and Concrete buildings**

**Choose building in a professional way!**  
Everything starts with a good quality architectural project!

Never make compromises on either architecture nor execution quality!  
They are both essential for a good result in construction.

# Wood framing construction

Wood framing construction and use of metallic connectors technology is cost, material and time effective. It has a long tradition of use in the United States and Europe and the results are more than satisfying to both customers and constructors.

Our activity centers on designing and following the correct execution of wood structures – framing (from terraces, gazebos, carports, garages, houses, attics, multistory buildings, multifunctional halls, to interior design solutions).
